## MAINTENANCE REQUIREMENTS

Maintenance is the responsibility of the Owner. For the Products, there is virtually non-specific maintenance required, except including following tasks that are mandatory to keep roofs in good order. These tasks are reminded hereafter:

**Leaf debris:** do not allow leaf debris to build up on the surface of the Products. Left unattended the debris will form leaf mould which by holding moisture in the corrugation tile valley will soften the materials and ultimately reduce their effective life.

**Tree and shrub branches:** check that overhanging branches are not in contact with the surface of the Products, as wind generated movement can result in mechanical damage.

**Condensation:** always ensure high and low level ventilation channels are unrestricted

**Gutters:** clean all gutters, down-pipes and gullies regularly. If water collection systems are used, filter and circulate water in accordance with the instructions of the system manufacturer. Whilst rainwater run-off from Onduline roofs is nonhazardous, we do not recommend its use for human consumption due to the inherent risk of air bourn pollutants being introduced into the water collection system.

**Roof traffic and Safety:** working on roofs can be a hazardous operation.

All precautions should be taken as specified by applicable safety regulations.

## STORAGE REQUIREMENTS

**Packing:** products are delivered in a non-return packing specially designed to guarantee optimum storage conditions. **Storage:** packs must be transported and stored under conditions which protect the Products from humidity and excessive heat.

If the packs are covered with a plastic cover, prolonged storage in full sunlight should be avoided. Pallets must not be stacked.

Construction site storage: lay flat.

**Handling:** the weight of the Products allows easy manual handling. Mechanical or rope sling handling may be used for high buildings.
